

Report Week 5

Problems:

I was bound to bed due to illness for 5 days (Wednesday-Sunday), which halted almost all work progress

Achievements:

- Despite the involuntary break, I managed to get some work done on Monday and Tuesday
- Refactoring, since the amount of code being created is steadily increasing
- Python implementation of a circle structure and a pentagram with edges

Goals for next week:

- Identical with last weeks report – get an edge structure running on the SpiNNaker
